Thingsdata.

Internet of Things, discover together with us what it is. Thingsdata is an independent IoT system integrator that helps organizations from all levels to realize the challenges of Internet of Things (IoT). With us as partner you can break free from the traditional business models or processes and modernize trough the deployment of innovative IoT technology.

Our goal is to make the complex technological IoT elements (hardware, connectivity and data processing) accessible for every organisation and in addition support, to extract maximum value from the IoT data.

Since 2015 | Based in Amsterdam | Privately owned company | Worldwide reach

Hardware

'Connecting devices at cloudspeed'

IoT hardware is the source of information, it is equipped with the intelligence to collect all different types of information. Innovative hardware is not only capable of detection and measurement, but can also act if it is equipped with components that can be controlled remotely. It also possesses a cellular module, that makes it so that there is always connection with the cloud. We guide you in selecting the most suitable hardware.

- Sensoren (off the shelf)
- 4G routers
- Customize sensors and gateways

Connectivity

'Limitless local & global connectivity'

IoT connectivity, ensures that your installations, devices and sensors communicate trough your own mobile internet access. We have M2M, LTE M, NB-IOT and LoRa technologies by default in our portfolio. With our portfolio of IoT networks Thingsdata offers for every application the right mobile data solution. There is intensive collaboration with a partner ecosystem, including the best roaming contracts nationally and internationally.

- It works anywhere around the world
- It is compatible with every device
- Different subscriptions

Data processing

'Analyzing a lot of data, with IoT monitoring'

Capture data that's been unused up to now in a IoT-portal and analyze this to improve. Huge amounts of operational data can be easily analyzed, visualized and even integrate with existing systems. With the benefit to determine which data is relevant for your organization, you can achieve this with an logical IoT-portal. We guide you in the process of selecting the most suitable IoT-portal for data processing, storage, reports and analyzation.

- Provisioning and management of IoT devices
- Processing, collecting and visualizing data
- Security
